English - Fluent

Experience

2022 - 2023 UI/UX designer at Now Branding.

Notable projects:

- **Mobile ODT B2B Website UI/UX**

I designed a website for a women's tech company that aimed to assist those affected by cervical cancer. The client had a clear vision of what they wanted, and my role was to ensure that their ideas were integrated seamlessly into the website while adhering to pre-established branding.

- **TedX Landing Page UI & Elementor**

I designed a landing page for a TedX event that was held in the metaverse. My objective was to create a cutting-edge and futuristic design that resonated with the TED brand's existing visual identity. In addition I QAed and resolved any issues found during the development stage myself.

- **Benarit App UI/UX**

I redesigned the interface for Benarit, a software utilized by contractors, supervisors, and project managers in the construction industry for over 40 years. My goal was to modernize the UI and create a user-friendly experience for new users while maintaining consistency with the existing interface to avoid alienating old users.

- **Afimilk New Year's Special Employee Website**

I led the project to create a website exclusively for Afimilk's employees. The concept was to create an Instagram-like feed for company events, vacations, and casual moments. With a tight deadline ahead of the New Year's celebrations, I managed the project from start to finish, working with the HR team, designing the UI and posts, uploading content, and conducting QA.

- **Landing Pages UX & Elementor Development**

I designed and developed multiple landing pages using Elementor and CSS.

What I Look for in a Job

A place where I can sharpen my skills. I enjoy tackling challenges and learning new things.
